

# KONEK PSN

## PROCESSING OF PLASTICS

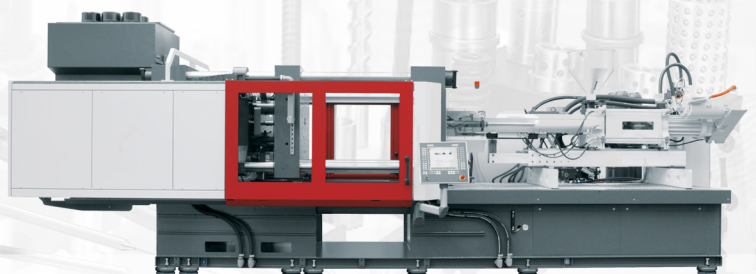

KONEK PSN manufactures plastic components by injection moulding for the automotive, electrotechnical, household appliance, and construction industry. The clamping force of our company-owned injection moulding machines ranges from 40 to 275 tonnes and the shot weight reaches 1,080 grams. Our continuously upgraded and expanded machine park ensures the highest quality and reproducibility of manufactured products.

Our customers are offered both fabrication of low-volume batches of parts and large-batch production. We also test new injection moulds at the request of our contractees.

We process materials such as ABS, ABS/PC, ASA, PMMA, PC, PA, POM, PET, PBT, PP, PE, PS, PPO as well as thermoplastic elastomers including e.g. TPU, TPS, EVA.
